The Lagisza project in Poland is an important step in advancing utility power generation. At the heart of the plant is the world’s first advanced Circulating Fluid Bed (CFB) steam generator, representing a culmination of over 30 years of technology development by Sumitomo SHI FW.

It is the first CFB power plant in the world to incorporate highly-efficient, vertical-tube, supercritical steam technology and is large enough to produce electricity at the very economical utility scale.

This CFB has many other advanced design features like, compact solid separators, INTREX™ super heaters, and low-temperature flue gas heat recovery, further improving reliability, operational flexibility and overall power generation efficiency and economics.
